Subject: PB Error Messages - Meaning and How to Respond/Correct?
To: ham-space@ucsd.edu

This weekend I had two excellant passes of K0-23. During both passes the
following Error Messages occured repeatedly:

Out of Memory

Error Allocating hole to init file

What are the meanings of these two messages and what are the most likely
causes? I was not able to find the information in the PB documents.

The setup is a DSP2232 serially connected to a 486 SX (20 MHz) at 19200 .
The software is running in DOS and there is only one TSR in memory
(loaded high) - an evaluation copy of righttime - to keep the computer time

accurate. I am using the serial monitoring capability of Righttime so that it does not interfere with the operations of PB.

I did reboot the computer each pass and in one instance the error messages re-occured and in the other they only appeared once and then PB settled down.

Any suggestions or comments would be welcome.

To: ham-space@ucsd.edu

Greetings,

I am looking for recommendations (and used items if you have them) for pre-amps for 145 and 435MHz. I have looked at units made by ARR, SSB, and Mirage/KLM. So far, the Mirage/KLM KP-2 series looks like the best price/performance package.

Thanks,

To: ham-space@ucsd.edu

Hello,

I am looking for information about the Kansas City Tracker/Tuner or any similiar device. If you know where to get these, or have one for

sale, please send email.

Thanks,
